

The purpose of this project is to provide an accountant service for entrepreneurs to make the administrative work as streamlined as possible.

We are designing and implementing a website where customers can log in and keep track of their finances in a safe way. The site will provide an easy way to create, send and receive invoices with all necessary information for entrepreneurs and business owners. The invoices will be possible to send both on and off the platform and can be sent from different accounts or companies (if a user has multiple companies). Further, the website will provide an overview of all economic events of the user, as well as information about the users' profile.

Our external stakeholder of this project is A.Finnman with Oscar Halleröd and Dominique Persson in the lead. A.Finnman is a start-up company in need of developing their websites with all the functionalities.
