# Team Reflection w8

Sony Walkman WM-FX 199

Customer Value and Scope
- **the three KPIs you use for monitoring your progress and how you use them to improve your process**

Are you satisfied with the work in this sprint?

We decided that this sprint is 2 weeks long, because of holidays and other things that made this week too short for a sprint. So one team planned to do most of the work next week, which is why some probably are not happy with their work this week. These KPI's will probably show the group's performance better next Team Reflection since that is when this sprint is done.

Did the planning for the sprint work out in a good way?

- Same as before, it is difficult to say if the planning worked out great or not yet, since the sprint is not finished. However, everyone knows what they should do during the sprint, so planning has at least worked to some degree.

Are the small teams (within the team) synchronized?

-

We have some spread tasks in our different teams. This, together with different plans for this week's work, has led to some asynchronized work. This is not a big problem yet however, since each team's tasks are decoupled from the other teams' tasks right now.

Application of Scrum

- **the roles you have used within the team and their impact on your work**

This week, we swapped teams. Because of this, some educational time was needed in the beginning of the sprint. This was not a big hurdle, because everyone in our team is good at learning new things it seems. Since we are done with our MVP, swapping teams is not as big of a problem now as it might have been before we finished our MVP, so it has not impacted our work a lot, instead it has been a great opportunity to learn new things.

- **the agile practices you have used and their impact on your work**

We have not changed our agile workflow so this is the same as last week so much. However, during our last sprint review meeting with our PO, he gave us some very new tasks which we adapted our workflow to. This led us to change the teams and their work in the path the PO valued highest.

- **the sprint review and how it relates to your scope and customer value (Did you have a PO, if yes, who?, if no, how did you carry out the review? Did the review result in a re-prioritisation of user stories? How did the reviews relate to your DoD? Did the feedback change your way of working?)**

We had a PO, Oscar. During our last sprint review meeting with our PO, he accepted our product as an MVP, which was a big milestone for us as a team. Now we could take on new challenges. During this sprint review meeting, we also discussed what to do with the remainder of our sprints, and Oscar had a lot of ideas, but we landed in two major user stories. One is to implement Google's and Facebook's API to track data from posts and users, which will later be used to monetize them in Finman's product. Another is to allow a user to save customers to quickly and smoothly add a customer to an invoice. A big thing that our PO has pushed is that there should be no risk of mistake while making an invoice, which this user story helps out with. These user stories led us to swap teams, which has been a change in our way of working, but not an unwelcome one. These two user stories were, in our eyes, too big for this week's sprint, so we made this sprint two weeks long.
